NEW!!!!!! TUCAN GETTING GREEN!!!!

The new TOYOTA PRIUS, modern and aerodynamically designed has pleasant and stylized lines. The contemporary design of the body combines individuality with versatility and a wheelbase that allows having more capacity in the trunk. Its compact style guarantees the most capacity of interior space with

With TOYOTA PRIUS you can forget the jerks. Its electronic CVT (Continuously Variable Transmission) allows the acceleration to be linear, therefore, tremendously smooth.

The Prius has such low emissions that it is considered to be a SUPER ULEV (Ultra Low Emissions Vehicle), what provides a powerful performance and a very exceptional environment friend.

The “Hybrid Synergy Drive” combines in an intelligent way an electric engine, with a torque that is superior to a F1 vehicle, with a gasoline engine that provides with assistance when needed.

The Prius works with “DRIVE BY WIRE” technology, which substitutes the mechanic connections for advanced electric connection systems in a completely reliable and safe way. There are simple electronic messages when transmitting the commands.

Another characteristic that makes the PRIUS unique is the fact that **it is not necessary to plug the battery, since it recharges itself.**
