TOYOTA PRADO LAND CRUISER

The very modern design of the Prado Land Cruiser beats easily the tough off-road grounds challenge. The independent double-wishbone front suspension and the 4-link rear suspension are mounted on the rigid base of a light frame. This offers superior manipulation, control and stability when braking, so the drive can be comfortable outside the road. The responsive power and available torque of the engine has an extraordinarily balanced performance.

The Prado has a careful ergonomic design. The attention to comfort help you enjoy all your moments. The variety of possible layouts fits all the family, besides all they want to carry. The active and passive safety measures add the confidence you need. Next, the characteristics for our 2008 Turbo Prado Land Cruiser (LP19):

General Data
